

Firmware Usage

The USB Magnetometer software does not require an installer. You only need to copy the USBMagVxx.exe program to your computer.

You may also copy the USBMagDefaults.txt program to the same folder as the USBMagV3xx.exe filder.

It is a textfile that contains the startup values for the USBMagV3xx.exe program. It is not necessary, but it is convenient if you prefer different ranges or different plot window buffer size.
